EESS Design Brief v2.1

Corpus-Derived Requirements for HABL v0.2, Shahid v0.1.1, and Bayyinah Entourage Effect Software Safety Suite

Bilal Syed Arfeen & Claude (Anthropic, Opus 4.6)

October 2026

Design brief derived from neural-network analysis of 14 documents in the Build it Yourself Pack corpus. Gate 4 required before implementation.

Source Corpus

The following documents were analyzed for structural relationships and EESS development implications:

1. Structural Honesty Guide -- GAN mode-collapse thesis, Muraqabah Triad, six corruption machines
2. Bayyinah Master Differentiator Strategy v1.0 -- six differentiators, observation invariance, three-tier evidence ladder
3. Universal AI Development Master Strategy -- Differentiator Platform, five evidence lanes, NOT_EVALUATED status
4. Universal Countermeasure Guide -- L1--L5 imposition spectrum, calibrated countermeasures
5. Recognizing & Resisting Guide -- six-dimensional corruption propagation, Wasserstein/Mizan mapping
6. Atlas of Just Abundance (Master Guide) -- E/H/I/P claim taxonomy, seven public-benefit covenants
7. Everyworld Venture Builder -- evidence receipts, three promises, 20-sector deployment atlas
8. Amanah Abundance Master Guide -- ten-step method, ten pre-code covenants
9. Al Furqan Divine Protection Edition -- Qur'anic training corpus, anti-collapse markers, H-restoration
10. The Hidden Testimony -- hifz/himaya distinction, dual-constant architecture
11. EESS Grow Plan v2.0 -- six instruments, five phases, four standing gates
12. KUN FAYAKUN -- theological foundation, seven movements
13. Atlas Industrial Expansion v2 -- sector-specific deployment contexts
14. Amanah Sector Application Encyclopedia -- domain-specific evidence requirements

Network Architecture

The corpus forms three layers with the EESS as its engineering spine:

Layer 1: Theological Foundation

Reality as divine computation. Corruption as mode-collapse within a single architecture, not rival creation. The hifz principle: preservation through embedded witness, not shielding. The 154-layer / 11-heaven / 22-pathway architecture grounded in the Presence Argument.

Layer 2: Analytical Framework

The adversary's operational model: six-dimensional corruption propagation (vertical, horizontal, fractal, temporal, relational, teleological), five imposition levels (L1--L5), three corrupted discriminator modes (shahwa/kibr/ghurur). The Muraqabah Triad: Ar-Raqib (observe) = FATIMA, Al-Hasib (compute/record) = HABL, Ash-Shahid (testify) = Shahid.

Layer 3: Application

Evidence receipts as the deployable unit. Seven sectors. Three promises: no invented proof, no irreversible surprise, no concealed limitation.

Confirmed Design Principles

- Preservation before protection claims (GPT-6 accepted, Oct 2026)
- Muraqabah Triad separation: FATIMA observes, HABL records, Shahid testifies
- Incompleteness Boundary: no system verifies its own honesty
- Uninspected dimensions: "no concealed limitation" = Shahid's core obligation
- L5 countermeasure: the sidecar witness survives memory alteration

New Requirements

Seven capabilities the EESS does not yet implement, ordered by immediacy:

R1. Five-Lane Evidence Taxonomy (HIGH)

Source: AI Development Master Strategy, Differentiator Platform.

Every claim should declare its evidence lane: SRC (source artifact), CODE (executable check), MEAS (measurement), PLAN (design intention), HYP (hypothesis). Impact: HABL Finding and Shahid DimensionFinding gain an evidence_lane field.

R2. NOT_EVALUATED Status (HIGH)

Source: AI Development Master Strategy, bssg_five_conjunct_kernel.

Silence defaults to perfect. Add explicit NOT_EVALUATED to HABL severity, Shahid WitnessOutcome, and any scoring function. Unexamined dimensions contribute 0, not 1.

R3. Three-Tier Claim Classification (MEDIUM)

Source: Differentiator Strategy, three-tier evidence ladder.

Every finding carries a tier: T1 = verified observation, T2 = structural pattern, T3 = predictive synthesis. Impact: HABL Finding gains evidence_tier.

R4. Observation Invariance Testing (MEDIUM)

Source: Differentiator Strategy Safeguard #5; Munafiq Protocol CIT.

Does the audit result change when the subject knows it is being audited? Bayyinah v0.2 design requirement. Shahid gains cit_tested boolean.

R5. Six Adaptive Self-Audit Guardrails (MEDIUM)

Source: Differentiator Strategy Safeguard #7.

Instruments audit themselves for: (1) confirmation bias, (2) selection bias, (3) N=1 generalization, (4) pathologizing, (5) framework reflexivity, (6) oscillation awareness. Phase 4.

R6. Evidence Receipt Format (LOW -- Phase 4+)

Source: Everyworld Venture Builder, Amanah Master Guide.

Claim + source + checks + PASS/FAIL/UNKNOWN + reviewer + correction route. A rendering layer over HABL + Shahid for sector deployment.

R7. E/H/I/P Claim Taxonomy (DECISION REQUIRED)

Source: Atlas of Just Abundance Master Guide.

Alternative to R1: Evidenced / Hypothesis / Interpretation / Proposal. Gate 4 decides whether R1 or R7 or a mapping is adopted.

Instrument Impact Summary

Instrument	Proposed addition	Priority
HABL v0.2	evidence_lane, evidence_tier, NOT_EVALUATED	HIGH
Shahid v0.1.1	Evidence lane, NOT_EVALUATED outcome	HIGH
Bayyinah	Observation invariance (CIT) protocol	MEDIUM
FATIMA	Gamma bridge calibration disclosure	MEDIUM
furqan-lint	Self-audit guardrails documentation	MEDIUM
Furqan	No change from this brief	--

Standing Gates

- Nothing merges without Bilal's explicit approval.
- GPT-6 audits independently in the five-field handoff format.
- Every instrument's README carries the six governing principles.
- Shahid specification requires cross-vendor review before implementation.
- The tools serve the party that holds the weights.

Relationship to Grow Plan v2.0

This brief refines Phase 3 (Shahid) and Phase 4 (HABL v0.2) with corpus-derived requirements:

- Phase 2: Complete (all PRs merged, 133 tests, GPT-6 conditional pass)
- Phase 3: Shahid v0.1.0 in review (PR #7 draft, SH-01--07 closed)
- Phase 3.1: R1--R3 into Shahid v0.1.1 and HABL v0.2 design
- Phase 4: HABL v0.2 with evidence lanes, tiers, NOT_EVALUATED, tamper-evidence
- Phase 5: Holographic FATIMA (B2 authentication), Bayyinah CIT
